EDUCATION

Yeshwantrao Chavan College of Engineering

B.Tech in Computer Technology — CGPA: 8.6

Kamla Nehru Mahavidyalaya

Higher Secondary Certificate (HSC) — Percentage: 74.5%

Tejswini Vidya Mandir

Secondary School Certificate (SSC) — Percentage: 84.5%

Nagpur, Maharashtra

Sep 2024 – Present

Nagpur, Maharashtra

2024

PROJECTS

Hospital Treatment Cost Prediction | *Python, Pandas, Scikit-learn*

Feb 2026 – Present

- Developed a machine learning model to predict hospital treatment costs based on patient demographics and medical attributes.
- Performed data preprocessing, feature engineering, and encoding of categorical variables using **Pandas** and **Scikit-learn**.
- Implemented preprocessing pipelines using **ColumnTransformer** and **Pipelines** for efficient model training and deployment.
- Evaluated model performance using regression metrics including **MAE, RMSE, and R²**.
- Built an interactive prediction interface using **Streamlit** for real-time cost estimation.

Real Estate Data Scraper & Price Prediction | *Python, BeautifulSoup, Scikit-learn*

Mar 2026 – Present

- Developed a web scraper using **BeautifulSoup** to collect real estate property listings from online platforms.
- Performed data cleaning, preprocessing, and feature engineering using **Pandas**.
- Trained regression models to predict property prices based on location and property attributes.
- Built an end-to-end ML pipeline and deployed predictions through an interactive **Streamlit** web interface.

ARIS – AI Resume Interview Simulator | *React, JavaScript, CSS*

Feb 2026 – Present

- Developed the frontend interface of an AI-powered interview simulator using **React**.
- Built responsive UI components for resume upload and simulated interview interaction.
- Designed a clean and interactive user interface to mimic a technical interview environment.
- Integrated frontend components to communicate with backend AI services for interview question generation.
- Source Code: [GitHub Repository](#)

ACHIEVEMENTS

- Won **1st Place** at **YCCE Enigma 1.0 Hackathon** for developing an innovative technical solution and demonstrating strong problem-solving skills.
- Ranked **Top 10 out of 83 teams** at the **TechAlfa Hackathon**, building a competitive technical project under time-constrained conditions.
- Secured **11th Place out of 65 teams** at **YCCE Enigma 2.0 Hackathon 2026** in a competitive problem-solving and development challenge.

TECHNICAL SKILLS

Languages: Python, C++

Machine Learning: Scikit-learn, Regression, Classification, Ensemble Learning, Feature Engineering, Data Preprocessing, Model Evaluation

Deep Learning: TensorFlow, Keras, Artificial Neural Networks (ANN), Convolutional Neural Networks (CNN), Recurrent Neural Networks (RNN), Long Short-Term Memory (LSTM), Keras Tuner

Data Science: Pandas, NumPy, Matplotlib, Seaborn

Natural Language Processing: Tokenization, Word Embeddings, Text Preprocessing

Frameworks: Flask, FastAPI, Streamlit

Web Scraping: BeautifulSoup

Developer Tools: Git, GitHub, Jupyter Notebook, Google Colab, VS Code
